AUTUMN is the most favorable time to sow lawn seed, the earlier the better. In the short days and cool nights the seedling plants make vigorous growth. Give them all the time possible to become established before freezing weather arrives.

In the fall it is more important than ever to sow only permanent grasses, free from short-lived, coarse growing types. For a lawn of permanence and beauty, our famous Chicago Parks mixture is recommended, containing only fancy, re-cleaned seed of fine leaved, hardy, lasting grasses of high purity and germination. It contains no timothy, or other coarse adulterants. Remember, cheap mixtures invariably disappoint and increase rather than reduce expense.

We offer Chicago Parks mixture without Clover as "Fairway Mixture" at Chicago Parks prices.

Vaughan's "Private Estate" Bent Formula

For those interested in a deluxe mixture we highly recommend our Private Estate formula. This formula contains over 98% pure seed and is free of all noxious weeds.

In addition to Kentucky Blue Grass of the highest quality, to insure a durable and resistant foundation for your lawn, Private Estate formula includes an important proportion of bent. It produces a heavy turf of very fine texture. This mixture is equal or better in purity to the highest priced mixtures and most important, it contains more bent seed. It is the best value on the market.

Price, 1 lb., 95c; 2 lbs., \$1.90; 3 lbs., \$2.80; 5 lbs., \$4.60; 10 lbs., \$9.00; 15 lbs., \$13.40; 20 lbs., \$17.75; 25 lbs., \$22.00; 100 lbs., \$84.00.

Vaughan's "Columbian"

When making a lawn on sandy soil or in moderate shade, conditions are met with which require the use of a special grass seed blend. Vaughan's "Columbian" is the correct blend for such locations.

Vaughan's No. 25 Lawn Formula

An economy blend for new seedings and quick results which should be followed by reseeding with a more permanent blend like our "Chicago Parks." In spite of its low price, this blend does not contain timothy. Sow at the rate of 1 lb. to every 200 sq. ft. Begin cutting when grass is 3 to 4 inches high and continue to cut regularly to keep turf fine.

Tall, Giant Flowering Tulips

NEXT spring, for the first time since war began, American gardens can be restored to full peace-time beauty. Great progress has been made this year in producing seeds, bulbs and plants. With a few exceptions, supplies of these are approaching normal.

Prices of fall bulbs in this catalogue are substantially reduced from those which prevailed during the war. Our list of varieties is much enlarged, and includes those which in our opinion are the best of each color, new and old.

Holland has no monopoly on "tulip time." Through most of our country the first spring burst of color to include all rainbow hues comes when the tulips flower, and the garden's winter dullness changes in the space of hours to summer brilliance.

At least a month's display is lost, at the season when garden beauty is most precious, if your garden lacks these lovely flowers.

All May-flowering tulips may be planted together harmoniously. Darwin, Cottage and Breeder tulips are merely different clans having distinctive family traits, but each with beauty which blends admirably with its cousins. They are listed separately for convenience of reference.

Planning a tulip garden is made easy by the fact that you may count so surely upon the flower blooming as planned. The height, the color, the flowering season, are all so well established, it is a pleasure to plan a color effect and in the spring see it develop in life, just as imagined the previous fall.

Darwin

Darwin tulips are characterized by a soft overtone which gives their colors a pastel effect. The flowers are cup-shaped and carried on tall, stiff stems. In color range they include all the rainbow hues, in amazing variety. Yellow, which long was missing from the Darwins, is now represented by several fine varieties; and new varieties include splendid giant whites.

Included in the variety lists on this and the following pages are many newly introduced varieties which show improvement in color, height, size or in some other important respect, over older varieties. But at the same time we retain the best of the old and tried varieties, many of which remain the finest of their type, and may never be surpassed.

SPECIES TULIPS IN THE ROCK GARDEN

New Race of Early Darwin Hybrids

TRIUMPH STRAIN

NOT since the Darwin race was introduced, has so great an improvement been made in the tulip family, as in the new Triumph class. Here are early tulips—coming at a time when every bit of color in the garden is more precious because there is so little of it—with stems as tall flowers as large and colors even more brilliant than the Darwins. A hybrid of the Darwin and early singles, the Triumph tulips have a distinctive beauty of their own, and a clear luminous color quality which will make you treasure them. Two full weeks are added to the tall tulip season by planting these.

Cottage Tulips

TULIP DIDO, PINK COTTAGE

COTTAGE tulips are rapidly losing their uniformity in shape, characterized by egg-shaped blooms, with pointed, even reflexed petals; since they have been used extensively in hybridizing with other types. As a result of these crosses, this class now includes the largest of all tulips, the variety Advance; and many other newer varieties which have the typical cup-shaped form of the Darwin and Breeder types, combined with the brilliant clear coloring, in which the Cottage type has always excelled. In general Cottage tulips blossom a few days later than the Darwins, and carry their flowering period into the early days of June, especially if planted in a shady position. But they harmonize perfectly with the Darwin and Breeder varieties, and supply a quality of clear, bright color which the others lack.

Breeder Tulips

PLANT BREEDER TULIPS WITH BRIGHTER COLORS TO BRING OUT THEIR RICH BEAUTY

FROM Breeder tulips, most of the tall, large flowered types have been developed. These were the "mother bulbs" of ancient Dutch breeders, grown not for their own rich beauty, but because among them would appear flowers of the striped and blotched coloring then esteemed so highly.

These stripes and blotches are now known to have been caused by a virus disease; and the Breeder tulips are valued for their own beauty. Among them are some of the tallest and largest varieties of all, and many colors rare among flowers—browns, bronzes, purples, dull gold and dark lilac, exquisitely blended. One of the most fragrant of all tulips is Don Pedro, a coffee-brown.

Alice Keith. (27 in.) Very bright orange-yellow edged golden with small olive green base. Large flower on strong stem. One of the finest Breeder Tulip for bedding. The flower becomes more beautiful as it ages. Doz., \$1.55; 100, \$11.00.

TALL, LATE DOUBLE TULIP, BLUE CELESTE

Double Tulips

New Tall, Late Varieties

Many new varieties have been developed in this class of tulips, which produce the largest flowers of all. They differ from the more familiar early double tulips in much the same way that early singles differ from the tall, late flowering giants. Blossoming at the same time with the Darwin, Cottage and Breeder types, they have much longer stems, and larger flowers than the early doubles.

There is no flower to compare with these tulips in their season; they rival peonies in size and beauty. The variety Eros is illustrated in color on the front cover of this catalogue. A small group of any variety planted in the garden border will serve as a focal point to attract admiring visitors. They are planted and cultivated in the same way as other tall, late tulips.

While these new varieties make dazzling displays in beds, their tall stems and graceful habit fit them well for planting informally among perennials or other tall, late tulips, which blossom at the same time.

Bleu Celeste. (Blue Flag) (17 in.) An attractive tone of pale bluish purple, which combines with other colors beautifully. They give a striking effect when planted in mass. Doz., \$1.55; 100, \$11.00.

Coxa. (2 in.) Carmine-red. Vermilion edged very small white border. Large flower. Very fine for border planting. Doz., \$1.55; 100, \$11.00.

Epique. (21 in.) Salmon rose shading to old gold near edges of petals. Very large flower and sturdy grower. Doz., \$1.55; 100, \$11.00.

Eros. (20 in.) The large double flowers are of a deep true pink with silvery high-lights. Its double flowers, borne on tall, strong stems, are compared to peonies by all who see them, but we do not know any peony which has its lovely coloring. A group planted in any garden will be a source of admiration. Doz., \$1.75; 100, \$12.50.

Mount Tacoma. (24 in.) A magnificent giant double white Tulip which reminds one of a peony in full bloom; superb for beds. Doz., \$1.75; 100, \$12.50.

Single Early Tulips

TWO OR THREE weeks of brilliant color in April, following the daffodils and preceding the Darwin tulips, are worth much to any garden. The early tulips alone can supply it; and among them can be found varieties of delicate tints and shades, as beautiful and with flowers as large as anything the May-flowering classes can produce. In height, 12 inches is not uncommon, and a graceful carriage fits these taller kinds to serve in any role a Darwin would grace.

Explanatory. The number following the name of the variety denotes the height in inches, while the (a) and (b) indicate their earliness of bloom—the (a's) flower together and are earliest; the (b's) flower together, but are somewhat late.

Couleur Cardinal. 8a As its name denotes this variety possesses the brilliant red coloring called Cardinal. Immense blooms of good cup form open later. Doz., \$1.55; 100, \$11.00.

Keizerskroon. 10b. This is one of the oldest, as it is, assuredly, one of the best early varieties. It is a strong, healthy grower, and a bed of it will bring into the early spring garden some of the color and joy for which we will have longed for many months. Doz., \$1.70; 100, \$12.00.

Dutch Roman or Miniature Hyacinths

These are small bulbs of the varieties listed in the first column on this page, and they are excellent for growing by amateurs in pots, pans, bowls or window boxes. They give flower spikes much larger than would be expected from their size, which is from 14 to 15 centimeters in circumference. Your selection of named varieties, chosen from the list in first column. Each, 20c; doz., \$2.00; 100, \$15.00.

Hyacinths

HYACINTHS are again available for gardens. Blossoming with the early tulips, they contribute to the spring garden fragrance as well as colors which at that time no other flowers can give so well. Indeed, it is doubtful whether at any time of the garden year lovelier true pinks and blues can be found than those which hyacinths provide.

They serve to border paths, near all garden architecture, including ornaments such as bird baths, pools and fountains, and groups of hyacinths may well be worked into the border planting, where they will provide a needed color foil or accent.

For garden planting, it is not necessary to use the largest forcing sizes. Bulbs of third and bedding sizes will do well. Take especial care to plant them in well drained soil, and if there is any doubt, elevate the bed a few inches to keep them above water. Plant bulbs six inches deep, and after the ground has frozen a light mulch to keep the frost in, will benefit.

For Winter Blooming

LIGHT, rich soil produces the best flowers. Place each bulb one inch deep, an inch and one-half from each other bulb or edge of pot. Water well, and set away in a dark, cool cellar, or an outdoor pit which is well drained. If outside, cover with three or four inches of sand or ashes. Let them remain there for eight or ten weeks to root, then bring them into a warm room, but keep them in the dark (cover the pot with a paper bag, cloth, etc.). Then when the flower spike is three or four inches out of the bulb, they may be exposed to the light, and will open beautifully.

Exhibition Hyacinths (Mammoth Bulbs)

These are the bulbs 19 centimeters and over listed in the center column on this page. They are not recommended for outdoor planting but should be used for forcing in glasses, or in pots or pans. We have arranged with one of our Dutch growers to select these bulbs for their ability to give huge spikes of flowers, suitable for flower shows, or for striking decorative effects.

DUTCH ROMAN HYACINTHS

All shipments of flowering bulbs ordered from this catalogue at dozen or less than dozen rates will be prepaid.

Orders at 100 rate will be shipped by express, charges collect, except that special offers will be prepaid where it is so specified in the offer.

Daffodils or Narcissi

GIANT
TRUMPET
BEERSHEBA

DAFFODILS are the first of the major garden flowers to blossom in the spring. This makes them doubly precious, as heralds of a season of joy, after the long winter.

Great advancement has been made in breeding new varieties, which are indicated by stars.

Culture of the Daffodil

The daffodil tribe likes a cool root run and its flowers are at their best in the cooler days of spring. Therefore it is essential to dig the soil deeply and provide humus. Like the tulip, the daffodil will not thrive if there is fresh manure in the soil and commercial plant food should be used when the bulb is planted. It likes a moist soil but it must have excellent drainage. The plant food should be mixed in the soil below the bulb and if the soil is heavy, a cushion of sand is advisable.

Where to Plant Them

Daffodils are particularly fine subjects to plant under the edge of bushes or among perennials in the hardy border as they seem to like to nestle among the roots of their neighbors. A clump of golden trumpets peeping from beneath the overhanging branches of Spiraea Van Houttei or nestling in a sheltered angle of a building are one of the gladsome sights of early spring.

A few bulbs can be tucked into odd corners all about the garden and they will repay mightily when the first sunny days of spring bring their sturdy shoots breaking through the earth.

Daffodils and narcissus need not be moved for several years if they are flourishing, in fact not until the clump becomes so large that it is evident it needs to be divided and they should be replanted at once.

Graceful Jonquils

Jonquils are graceful, sweet-scented flowers which thrive well in a moist, shady position in borders. Flowers are arranged on the stem in a cluster.

12 Daffodils for \$1.50 Naturalizing

12 Bulbs, \$1.50; 100 Bulbs, \$10.00; 1,000 Bulbs, \$90.00, Prepaid.

DAFFODILS are the first major flowers to bloom in the spring. By nature they are informal flowers, and look best when grown in drifts, in the shrubbery or under trees. They like to nestle among the roots of shrubs, and as they bloom before the leaves develop, they thrive in places which later in the season are well shaded. Our naturalizing mixture is an exceptional value, containing many of the best named Trumpet, Leedsii, Star and Poeticus varieties. Plant them and do not disturb until they crowd; the bulbs may then be lifted and replanted over a much larger area. A purchase of bulbs is an investment which will pay in bloom for a lifetime.

25 Daffodils for \$2.00; 12 for \$1.00. Smaller bulbs but of flowering size, packed in a special decorated bag with cultural instructions. Prepaid.

The Hardy Lilies

LILIAM PHILLIPINENSE FORMOSANUM

LILIES are hardy, thrifty flowers, capable of surviving conditions which would overcome flowers much less beautiful. Grow them in the border in small groups, with background, where their beauty has a suitable setting for its display. They blossom, as a rule, in midsummer, when fine flowers are at a premium. With each order a leaflet giving instructions for growing them in the garden will be sent. All our lily bulbs are American grown. They will be shipped in late October, and should be planted at once to lessen winter hazard and enable the bulbs to begin root growth this fall.

Outdoor Culture—When planting lilies out-of-doors, see that they have a well drained position, and where they will be shaded from very hot sun. Such places can usually be found around the shrub borders, and in the hardy plant border. Never mix manure in the soil around lilies, but enrich with a standard commercial plant food or with bone meal. Many varieties are termed "stemrooters," that is, they develop roots on the stem up to two or three inches from the ground. These roots are voracious feeders, and on them depend greatly the number and size of flowers. When they appear, the plant should receive a top-dressing of good rich soil on which they can feed freely. Spade over the ground thoroughly to a depth of 18 inches before planting lilies. Plant the bulbs 4 to 8 inches deep, depending on their size and the soil, deeper in light soil. Put some sand under and around the bulbs, and after covering protect with six or eight inches of leaves or other litter, which must be removed in late spring.

Lilium Canadense (Meadow Lily)

Should be planted five inches deep. It is an excellent lily for naturalizing. Height, 3 to 5 ft.

Bulbs You Can Flower Indoors

Lilies of the Valley

Ready to Ship February 1.

For the first time since World War II began we can offer imported lily of the valley pips prepared for forcing into flower in bowls. These beautiful, fragrant flowers may be brought to flower in 18 to 21 days, if pips from cold storage are used. They are easily forced in a bowl, if planted in sphagnum moss and kept well watered. Their dainty fragrance is preferred by many to the large Paper White Narcissi, and they are much quicker to flower. Do not order more than you intend to use at once as the cold storage pips will not keep. Plant about 25 pips in a 7-inch bowl, place in a warm temperature, 65 degrees Fahrenheit and shade from light until leaves and spikes are well developed, then admit light gradually. Increase temperature to 75 degrees or 80 degrees if possible. An inverted pot over each bowl answers admirably to shade them. They may be forced in soil the same way, in a 7-inch pot or pan. This is the treatment for cold storage pips only.

COLD STORAGE PIPS, (Ready February 1). 12 for \$2.50; 25 for \$5.00, postpaid.

SPHAGNUM MOSS, sufficient for 25 pips, 10c, postpaid.

Amaryllis

(Illustrated in Color on Cover F)

OUR strain of giant flowered amaryllis is rich in brilliant red, and lovely white flowers, with many in which the white ground is vividly marked with contrasting tones of red, pink and salmon. In size, this strain has never been surpassed.

Of all bulbs which the amateur can grow successfully indoors, the Amaryllis is the largest, most beautiful, surest to flower and most easily handled. Our new hybrids, especially are so gorgeous in size and coloring as to amaze those not familiar with them.

Place only one bulb in each pot, covering it as far as the neck or upper narrow part. Water sparingly at first until the flower shoots begin to appear. Some growers keep them in the dark until the flower stems are four or five inches long, and then bring to light.

After flowering they should be placed in a warm window, or set outside in sand or cinders and watered every day (sometimes twice a day), until the end of August when water should be gradually withheld and the bulbs allowed to go to rest. In the fall they can be forced again as with new bulbs.

MIXED. Flowers are immense, in an amazing range of color blends, splashed and striped in a manner not seen in other strains

Miscellaneous Bulbs

Weeks before the daffodils appear, snowdrops, chionodoxas, scillas and crocuses blossom in the garden, often peeping through late snow. These and other early bulbs are the first of all flowers to bloom, and precious for that reason. Every garden should have at least a small group, visible from a window, where their beauty can be enjoyed in cool weather.

Grape Hyacinths (Muscari)

Muscari, or Grape Hyacinths, are a race of spring-flowering bulbous plants which thrive in American gardens. They are not showy when only a few are seen together, but a drift of them presents a picture of beauty, especially if planted with late tulips, for which purpose they are well adapted. The species also look charming in clumps in the rock garden or border, and the Feather Hyacinth (*M. plumosum*), in particular, may be employed, with great gain, in pots in the cold greenhouse. In fact, pot culture gives this Grape Hyacinth such delicate and uncommon coloring, that it might well be grown anywhere under glass. All are very accommodating in their requirements, but prefer a good loam with a little old manure dug into it, and, in the case of the Feather Hyacinth alluded to, a rather warmer position. The bulbs should be planted during autumn at a depth of about three inches and about two inches apart.

ARMENIACUM. Deep blue, large flowers. 8-9 Ctns. Doz., 40c; 100, \$2.50; 1,000, \$22.50. 9-10 Ctns. Doz., 55c; 100, \$3.50; 1,000, \$30.00.

PLUMOSUM. Bearing in May handsome feathery plumes of violet colored flowers, very attractive. Doz., 60c; 100, \$4.00; 1,000, \$35.00.

Ornithogalum

ARABICUM. Throws up a tall stem with a cluster of star-shaped flowers; pure white with dark centers. Excellent for cutting, lasting a long time in water. Hardy in the South and other mild climates, but they should be given protection when planted outdoors in the North. Culture in the house is about the same as for Hyacinths. UMBELLATUM. This is the small white hardy variety that is seen in great profusion and around many of the old gardens. It propagates readily and adapts itself splendidly to naturalizing. It does well over a wide temperature range and blooms profusely each season with little or no care. Each, 15c; doz., \$1.25; 100, \$8.00; 1,000, \$75.00.

Double. (Largest Bulbs.) Doz., \$1.30; 100, \$8.50; 1,000, \$80.00.

Scillas (Squills)

As edgings and masses in beds and borders, Scillas are most valuable. They succeed in shady flower borders and bare shady places and odd corners.

SCILLA SPRING BEAUTY. Spring Beauty is a giant by comparison with the ordinary Siberica, very free blooming and ideal for growing in pans or pots. Brought into a 50 to 55 deg. house after being well rooted, it flowers within two weeks, the glorious blue spikes having stems 6 to 8 in. long. Perhaps there is nothing so truly blue that will bloom at that time. Outdoors it is a trifle later than the ordinary but decidedly superior. Large bulbs, doz., 85c; 100, \$6.00; 1,000, \$55.00.

SIBERICA (The Blue Squill). Bright blue, nothing more beautiful for edgings or pots in early Spring, flowering with the Snowdrop. Height, 4 inches. **Mammoth Bulbs.** Doz. 75c; 100, \$5.00; 1,000, \$45.00.

Rosea. Fine rose (15 in.). Doz., 60c; 100, \$4.00; 1,000, \$35.00.

Iriteleia

UNIFLORA VIOLACEA. A rootlike bulb which produces in early spring a pale violet-blue flower with white center, delightfully fragrant. They spread rapidly in the rockery or in masses under shrubs, perfectly hardy. About 3 inches high. Doz., 65c; 100, \$4.50; 1,000, \$40.00.

Hardy Perennial Plants for Fall Planting

HARDY perennials may be set out this fall in time to become well established before winter sets in; and next year will see them better developed, and bearing finer flowers than can be obtained from plants set in your border next spring.

This advantage is accompanied with very little extra risk. We

do not list the kinds which need special protection through the winter. It is always well to apply a light mulch of straw or excelsior over newly planted perennials, after the ground has frozen. This will tend to prevent winter thaws and frost heaving. Plants should never be planted where water stands or where there is poor drainage.

Fragrant Iris—Hardy with Protection

RETICULATA. This lovely species is one of the treasures of the garden or rock garden. It may be forced into bloom in the house with ease. Six or eight bulbs put into a 4 or 5-inch pot when received will bloom about Christmas time. The fragrant blossoms remind one of a bunch of fresh violets. Perfectly hardy with reasonable protection. It is one of the loveliest early flowering bulbs for the rockery. To show it off well, plant a number of bulbs under the white *Arabis Alpina*; Each, 15c. doz., \$1.25; 100, \$8.00.

ADMIRERS of the iris will find this group to be valuable additions to their collections. Flowering in late June and early July, they follow the bearded and Siberian irises, prolonging the display and producing flowers of a distinct type and quality of coloring. The colors are clear and brilliant, and the petals are delicate, but of excellent substance. They make quality cut flowers, lasting fully a week in water.

Bulbs should be dug each year after foliage has turned brown. They should be cured quickly in a dry location, and only the largest bulbs should be replanted for flowering. The smaller bulbs can be grown in a nursery row until they reach flowering size.

LIATRIS (Gayfeather) September Glory. Late flowering type noted for its outstanding beauty. The purple flowers are produced on extra long spikes during late summer. 50c each; 3 for \$1.25; Doz. \$4.25.

POLYGONATUM Multiflorum. Pendant sprays of white flowers on 2 foot stems. Each 50c; 3 for \$1.25; Doz. \$4.25.

PYRETHRUM (Painted Daisies) Robinson's Hybrids Mixed. Foliage is fernlike and ornamental. No other perennial flower possesses such color, hardiness, and general usefulness as these gorgeous blooms. The mixed colors blend and contrast with one another in a most pleasing profusion of gay bloom. This is a really great new strain. 60c each; 3 for \$1.50; Doz. \$4.75.

RUDBECKIA Purpurea. Reddish purple flowers, large brown cone-shaped center. Two to 3 foot stems. Blooms July to October. 60c each; 3 for \$1.50; Doz. \$4.75.

Annual Flower Seed for Fall Sowing

WHEN you sow seeds of annuals in Fall, you imitate Nature's method. Practically all hardy annuals will produce stronger, sturdier plants with earlier bloom by this method. Even when spring sowing is desirable experienced gardeners also sow in fall because they then have a continuous season of bloom. Also, they can sow at their leisure instead of trying to plant everything in a few short weeks. Do not be in too much of a hurry to sow.

The ideal time is just before the ground freezes for the winter. November 15th is early enough in normal seasons in the vicinity of Chicago and New York. If the ground has been prepared in advance, sowings can also be made during winter thaws.

A fine seed bed is desirable. No covering of any kind is needed unless there is danger of washing or from birds, in which case a light, loose covering of evergreen boughs can be

used. Plant at half the depth used when sowing seed in spring. Broadcast all small seed.

★Varieties preceded by star are especially recommended for sowing in the fall above your bulbs. They will grow in the spring and blossom after the bulbs have gone. Their shallow roots will not interfere with the bulbs maturing properly; their growth will conceal the bulb foliage after it grows yellow and unsightly.

"S" refers to the three standard or upright curling petals; "F" to falls or drooping petals.

Irises are most effective if planted 3 of a kind in a clump.

★Those indicated by a star are medium priced varieties of outstanding merit and are especially recommended for garden planting.

DYKES MEMORIAL MEDAL. This is an award made annually in America, France and England for the best Iris of the year.

As soon as German iris plants are received, plant them in a sunny, well drained place. Each plant should have at least eighteen inches clear space from other irises, as it will grow in a circle and many varieties spread rapidly. The rhizome, or fleshy root stock from which the leaves and roots grow, should be barely covered with soil, with the roots properly spread below, and the soil well firmed about them. Until the plant is established, give it frequent attention, watering in dry spells. In the first winter, after the ground has frozen, a light mulch to prevent thawing and heaving will be beneficial.

Vaughan's Peonies

PEONIES, especially the modern introductions, are probably the most valuable, and most beloved of all perennial plants. Planted in sun or semi-shade in single clumps or long beds; or bordering lawns, shrub rows, and drives, they give a grand display of large fragrant blossoms of brilliant colors during June, followed by their exquisite foliage which is very ornamental during summer months. They are also most effective for home and table decorations, and last longer in water than many other perennials. Avoid buying cheap Peonies; they require just as much care as the better kinds, and are disappointing in the end.

★Varieties indicated by star are of outstanding merit and are especially recommended by us for garden planting.

Supplies for Fall and Winter Gardens

Magic Soil Substitute for Starting Plants.

Mikamagic is a prepared form of vermiculite, cleansed of all impurities which might injure plants, and of the correct sizes for horticultural use. This remarkable material has proved to give almost magical results as a substitute for soil in starting seeds and rooting cuttings.

Having been subjected to a temperature greater than 2000 degrees F, it is completely sterile, and free of all organisms which might cause damping off. It is one-tenth the weight of soil and has remarkable ability to retain both water and air; both of which are vital to plant growth.

In addition to being an unsurpassed medium for started seeds and rooting cuttings, mineralite is effective as a soil conditioner, to lighten heavy clay soil, make it porous. It also makes an excellent mulch to prevent soil from drying out unduly in hot, dry weather; and when mixed with soil in which trees and shrubs are planted it helps hold moisture, and protects the plants from injury from drouth.

Material is made in three grades, coarse for base or foundation; medium, for the center layers, and fine for using on the surface of seed starters.

Prices, $\frac{1}{2}$ peck bag, 50c; $\frac{1}{2}$ bushel bag, \$1.75; 1 bushel bag, \$2.95. All shipped by express, charges collect.

CENTAUREA CYANUS

Illustrated Below.

1522 **Vaughan's Special Super Double Mixture Centaurea Cyanus.** A perfect strain of this popular hardy annual, which every one can grow in any garden soil. They have larger flowers, more double, with more vivid coloring and long, wiry stems, making fine cut flowers. If the faded flowers are kept cut, the plants will blossom continuously throughout the summer. ¼ oz., 25c; ½ oz., 40c; Pkt., 15c.

LARKSPUR

 Illustrated at Left.

2170 **Vaughan's Special Double Annual Mixture.** Charming mixture containing all the bright and delicate shades, makes wonderful cut flower material and should be planted generously. They should be grown in good rich well-manured soil, and in a full sunny position. The plants, moreover, should be given plenty of room in order to allow them to branch out freely, and make handsome specimens. Larkspur frequently self-seeds, and the young plants live through severe winter weather. Because of the long period of germination required in the spring, fall sowing is to be preferred, giving sturdier plants and earlier flowers. Because of the danger of physical injury to plants during winter, it is best to sow just before the ground freezes so that germination is delayed until spring. 1 oz., \$1.00; ¼ oz., 30c; pkt., 15c.

Chinese Sacred Lily (Narcissus)

TPIS narcissus is called by the Chinese the 'Joss Flower' or 'Flower of the Gods,' and 'Water Fairy Flower.' It is highly prized for the abundance of its flowers and its marvelously rapid growth. The flowers are white, with yellow cup, and very fragrant. Each bulb produces several flower-spikes. In China the bulbs are grown in the living rooms in fancy bowls filled simply with pebbles and water. Place in a sunny window by day and on a table near the center of the room by night, as frost destroys the flower buds. Care should be taken that it is not placed in a draft, as this may cause non-flowering. Recommended for Christmas flowering.

Most Beautiful of the Parrot Tulips *Tulip Fantasy*

12 for \$1.55; 100 for \$11.00

WHILE resembling the Parrot type in the extraordinary size of its blossoms, and its beautifully fringed and fluted petals, Fantasy is really unique, perhaps the forerunner of a new race. It has a straight, stiff stem, which most Parrots lack, and this makes it stand up in the borders instead of hanging its head. Fantasy originated as a sport of the famous Darwin tulip Clara Butt, and perhaps its greatest charm is the clear, true pink color of its forerunner. There are many tulip fanciers who regard Clara Butt as most beautiful of all because of this color. But while Clara Butt is a relatively small Darwin, each petal of a well grown specimen of Fantasy will measure three inches long and two inches across. On the back of each petal is a marking of emerald green. A group of Fantasy in your border will be a center of interest in the tulip season and a never failing attraction to garden visitors.
